

# the **OPTIMO** insulated rolling garage door

A competitively priced compact insulated rolling garage door with 'rolling code' remote control operation and spring steel locking to ensure extra security when closed.

The OPTIMO garage door is manufactured from high quality, European made, 55 mm x 7.5 mm twin-walled aluminium sections each of which is filled with thermal foam insulation. The rolling doors can be individually designed to meet both site specific requirements and your personal needs.

All OPTIMO garage doors are electronically operated and can be supplied with an internal or external manual override facility for use in the event of a power failure if required.

Standard operation of the door is via one secure 'rolling code' remote control which operates on the 433 MHz band. Maximum safety is achieved by using 'deadman' (keep the button depressed) operation.

**5 Year Motor Warranty · 1 Year Guarantee on all manufactured parts · 10 Year Colour Fast on all door colours**

***Manufacturing and Delivering Quality!***

## The OPTIMO – features at a glance:

- All OPTIMO doors are built in our UK based Washington factory and can therefore be supplied extremely quickly.
- The insulated twin-wall structure gives greater rigidity and strength than conventional single skin garage doors and provides a good level of both thermal and sound insulation.
- Colour coded side guide channel options are available for the doors to run within. The side channels are supplied with internal brush seals to reduce drafts, wear and tear, and ensure quiet, smooth operation.
- All OPTIMO garage doors are supplied in a pre-coated aluminium finish with colour coded cover to front and rear.
- The bottom edge of the OPTIMO door is a heavy duty aluminium profile which carries a micro seal to the base.
- Spring steel locking straps ensure that the OPTIMO is latched closed when in the down position.

## The OPTIMO – optional extras:

A number of optional extras are available to enhance the functionality of the OPTIMO rolling garage door:

- Safety Edge Pack – includes a full width wireless safety edge, a 868.53 MHz rolling code receiver/control box with light, and an 'i Like' handset for fully automatic operation. The pressure sensitive safety edge triggers the door to fully open if an obstruction is detected within the doorway whilst the door is closing.
- Internal Manual Override – a manually operated winder to open/close the door in the event of mains supply failure.
- External Manual Override – a lockable manual winder to open/close the door if the mains supply fails.
- Battery Backup – for electrical operation of the door with the remote handset if the mains supply fails.
- Additional remote control handsets can be supplied and coded to the system during installation if more than one handset is required.

Safety edge pack

Internal emergency manual override

External emergency manual override with security lock and folding crank

Battery backup – effort-free emergency door operation for normal operation during mains outages
